PDF-Mixer: Automating procedures

PDFMixer is a programme for automated processing of PDF files. In contrast to interactive editing, as with many other products, the main strength of PDFMixer lies in its ability to combine recurring operations in an automated process. This saves you time and money. The PDFMixer offers the comfortable way to combine different PDF files according to your wishes. PDFMixer can sort, rotate or remove pages, add watermarks or stamps, attach files, and protect your PDF from unauthorized access by using a password.

APPLICATION EXAMPLES

You can define several functions in a profile in any order. This profile can be assigned to a folder of your choice and will then do the work for you.

STAMPS AND PROTECTIVE FEATURES
Mark your intellectual property with a stamp, e.g. „sample", or state the date of receipt. Combined with the protective functions, you prevent the misuse of your PDF file.

WATERMARKS
Place a letterhead behind your PDF business letters. Simply create data sheets for small batch series of your products or prototypes with Word, convert them into a PDF and store them with a professional uniform layout.

ATTACHING
Complement any correspondence from your ERP system with your general terms and conditions or add individually selected data sheets to a sales quotation. It is also possible to attach PDF documents to a PDF collection that serves as a dossier (Pro version or higher).

SORTING
PDFMixer can be activated automatically after scanning a document. With a few mouse clicks you can sort, rotate, change the order or remove the individual sheets. This means that even landscape formats are no problem within the overall document.

WORKFLOW IN PROCESSING STEPS
Define the required processing steps in a profile. Subsequently, every user of the profile can have his PDF file edited using the profile. The user does not need any knowledge of PDF editing. This saves training effort and costs due to faster processing and ensures uniform results.

MOIN.

ARE YOU AUTOMATING YET?
