

Concentrate on your core business; we will take care of the security-related maintenance of your Joomla site.

Content management systems are comprehensive software systems that unfortunately are repeatedly target of attacks from the Internet. Regular maintenance of the

system is therefore very important to protect against manipulation and ensure the integrity of a website. The Federal Office for Security and Information Technology (BSI) has investigated the vulnerabilities and threats to content management systems, including Joomla. Systems that are not maintained or updated therefore pose an increased security risk. Regular security updates are released by the Joomla Core Team, which should be applied to achieve a high level of security. The functional extensions used on the sites, the so-called plugins, also display certain regularity.

**PREPARATORY WORK - UNIQUE ANALYSIS OF YOUR WEBSITE**

For Joomla sites that were not created by us, a one-time analysis is required to identify the installed version and the existing external components.

**ANALYSIS**

**BASIC**  
**125,00 €**

Status analysis	✓
Analysis of the current version and external components	✓
Comparison with the currently published versions of the individual manufacturers	✓
Documentation of extensions per vendor	✓
